ABSTRACTED-PUB-NO: BR 200004568A

BASIC-ABSTRACT:

NOVELTY - A meningitis type B and C vaccine comprising PS C (capsular polysaccharide serum group C) and outer membrane vesicles (OMV) of meningococcus serum group B.

An INDEPENDENT CLAIM is also included for producing the vaccine, using the capacity of the OMV to charge the PS C and as an antigen for the serum group B.

USE - A vaccine for meningitis type B and C.

ABSTRACTED-PUB-NO: US 5705161A

BASIC-ABSTRACT:

New immunity-providing B-cell activating molecule (A) derived from meningococcal lipopolysaccharide (LPS) with at least one epitope, comprises at least the communal part of the oligosaccharide (core region) of LPS specific for at least 2 meningococcal immunotypes (pref. L2 and L3) with galactose absent from the B-cell activating part. Also included are derivs. of (A) with immune-reaction inducing activity.

Also new are (1) saccharide-peptide conjugates (SPC) contg. (A) as saccharide component conjugated to a peptide part having at least one conjugated to a peptide part having at least one T helper cell activating epitope; (2) outer membrane vesicles (OMV) contg. (A) and/or SPC; (3) OMV having a gp. of polypeptides with immunoactivity of outer membrane proteins (OMP) bound to a membrane, at least one of these having a mutation in a surface loop; (4) nucleic acid encoding recombinant OM1 (or fragments) carrying such a mutation; (5) expresion vectors contg. this nucleic acid; (6) microorganism contg. such nucleic acid or vectors; (7) OMP-derived polypeptides which have a surface loop mutation; (8) nucleic acid encoding LPS that differs from wild type in having a mutation causing expression of no (functional) galE; (9) expression

vectors and microorganisms contg. this nucleic acid; (10) mutated meningococcal strains that produce galactose-free LPS or no functional galE.

USE/ADVANTAGE - OMV, SPC, the nucleic acids, expression vectors, transformed cells and polypeptides are all useful in vaccines to protect against gp. B meningococci. (A) represent small B-cell activating molecules that are easy to obtain, non-toxic and able to induce immunity against several immunotypes. Insertion of mutations in surface loops allows attachment of the saccharide component without altering the tert. structure (immunogenicity) of the saccharide.

ABSTRACTED-PUB-NO:

WO 9408021A

EQUIVALENT-ABSTRACTS:
